DEZHOU WEICHUANG RUBBER & PLASTIC CO., LTD.

DEZHOU WEICHUANG RUBBER & PLASTIC CO., LTD.

About Us

Dezhou Weichuang Rubber & Plastic Co. Ltd. is a modern high-tech enterprise in the integration of R&D, production and market expansion of high performance engineering rubber and plastic products. Our products are widely used in food machinery, beer and beverage machinery, steel rolling, railways, mining machinery, textile machinery, automobiles, automated conveyor equipment, etc. We maintain a leading level for more than 20 years by have a group of professional technicians, using advanced equipment, operating under a complete scientific management system and testing for quality.

Our company maintains dozens of numerical control devices, advanced molding integration production lines, and complete testing equipment like hardness tester, Rheometer and tensile machine etc. We passed ISO 9001 by managing every production chain scientifically. All of our products use environment friendly material and is tested strictly from source material to production to delivery processes. Our company can produce various high challenging parts and was invited many times to improve machines and develop new type of parts according to customers' requests; increasing the performance of machines, productivity and gained good reputations. Our products are widely sold in China and exported to Europe, America and South Asia.

Our main products: all kinds of nylon bushings, wheels, slides, carrier rollers, gears, scale boards and other irregular parts; all kinds of ultra-high molecular weight PE(UHMW-PE) plate and other irregular parts; all kinds of injection molding parts with different material; all kinds of polyurethane plate and wheels ; all kinds of rubber products ; all kinds of oil nylon and large casting MC nylon irregular parts.

Catalog

• Equipment.....	03
• Injection Molding Series	05
• Nylon Series	07
• Rubber Series	09
• Polyurethane Series	11
• PTFE Series	13
• Polyethylene	15
• Metal Series	17

Equipment

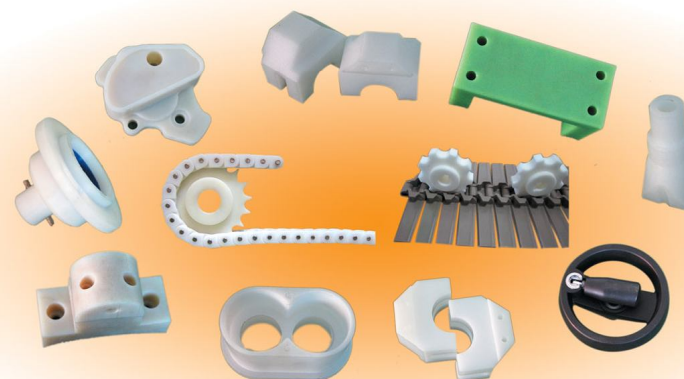

Injection Molding Series

We have dozens of large injection molding machines and outstanding mold engineers, can produce various high precise plastic products, which can be used in machinery, automotive, mining, energy, medical and building industries etc.

Injection Molding Products

Machining

Nylon Series

Nylon has good combination properties include mechanics, heat resistance, wear resistance, chemical resistance, self-lubrication and low friction factor. It have certain fire resistance, easy to produce, and is suitable for modification by reinforced fiberglass and other stuffing so that can increase performance and enlarge applications. Nylon has overload protection function, it can protect subordinate device or life and reduce lost when torque oversized, gear is broken and power transmission broken off etc. Nylon has good melt fluidity so that the thickness of its products can below 1mm.

Therefore, nylon is widely produced as bearing, gear, pump leaf and other parts in machinery, chemistry, instrument, automobile etc. by instead of metal.

 Gear 

 Wheel 

 Pulley 

 Slider 

 Axle Sleeve 

 Spacer 

 Pipe Clamp 

 Custom-made Parts 

Rubber Series

Material: NBR, EPDM, SBR, CR, NR, FKM, HNBR, etc

Application: Automotive, Agricultural, Electronics, Marine, Mining, Hydraulics, Valves, Oil and Gas, Construction etc.

Advantages: Anti-aging, Pressure resistant, High and low temperature resistant, Anti oxidation, Wear resistant, Non-toxic

Seals

Shock Absorption

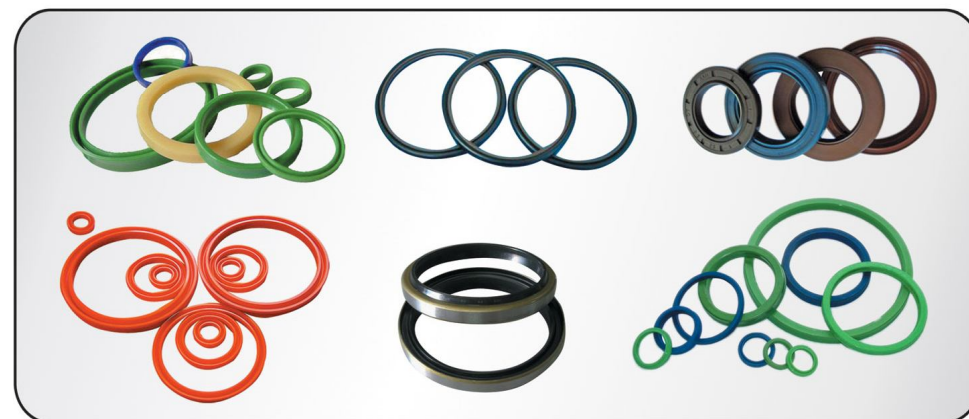

Custom-made Parts

Polyurethane Series ↘

Polyurethane is a new organic polymer material, and is honored as "The Fifth Plastic". It is widely used in numerous fields because of the brilliant performances. Polyurethane products have many advantages, like chemical resistance, tensile strength, high elasticity, high pressure resistant, good wear-resistant, high shock absorption, tear resistant, radiation-resistant, high strength and good cushioning function etc.

 Seals 

 Custom-made Parts 

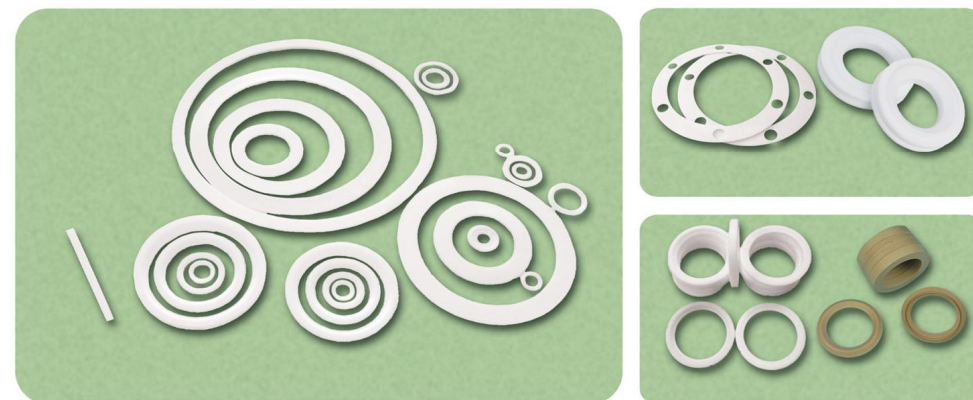

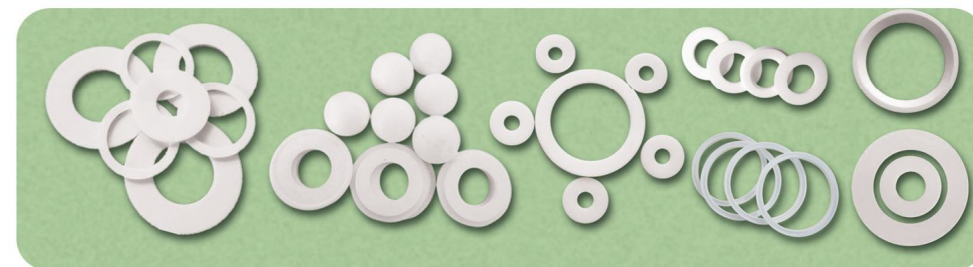

PTFE Series

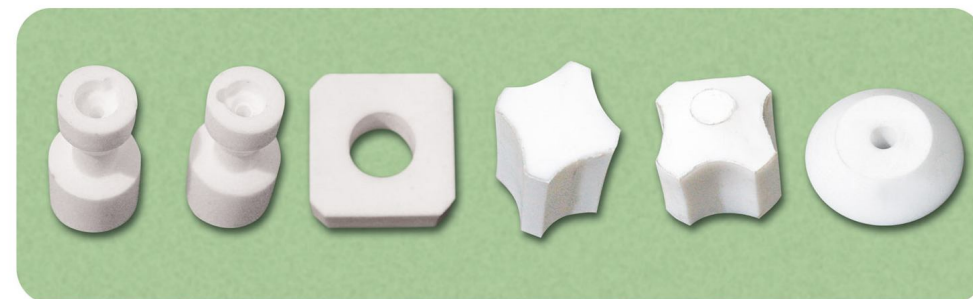

PTFE (Teflon) have excellent characters, can be used as industrial plastic. It can produced as pipe, stick, belt, plate, film and other irregular parts.

Advantages:

1. heat resistant(working temperature can reach 250 degree)
2. low temperature resistant(-196 degree)
3. corrosion resistant (resistant to most of chemicals.)
4. weather-proof
5. high lubricating
6. non-toxic
7. high electrical resistivity
8. non-inflammable
9. inoxidizability

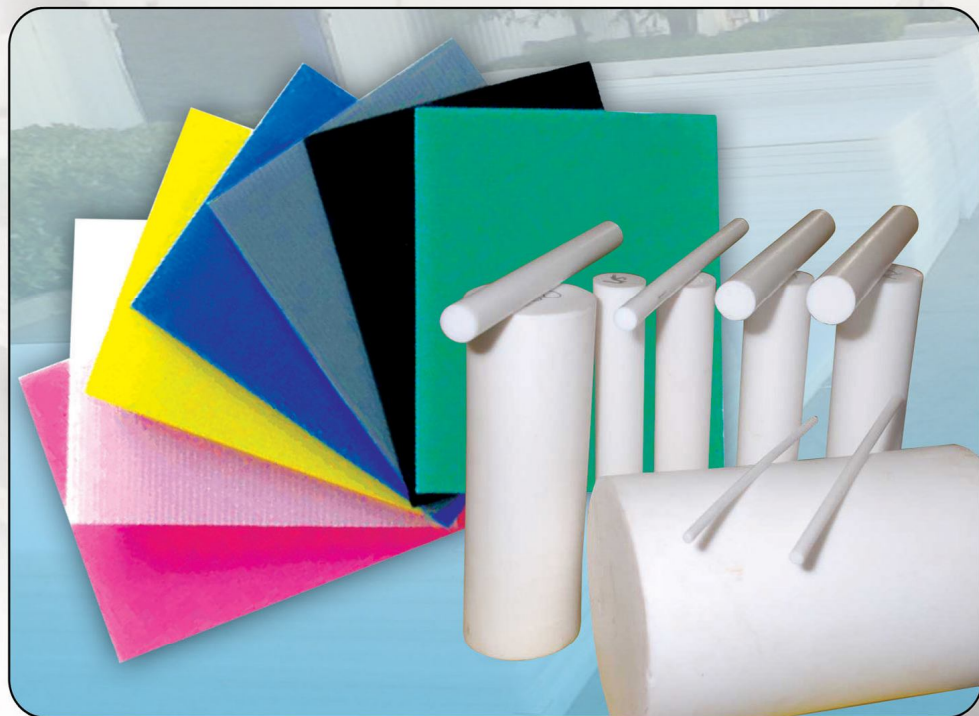

Seals

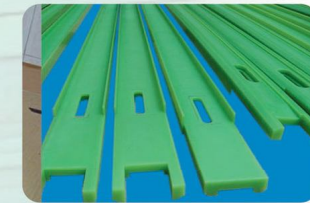

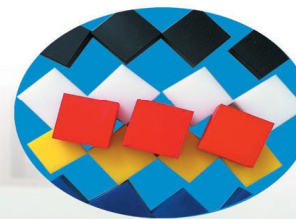

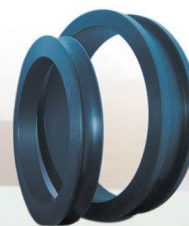

Custom-made Parts

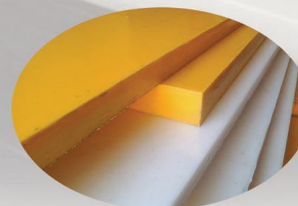

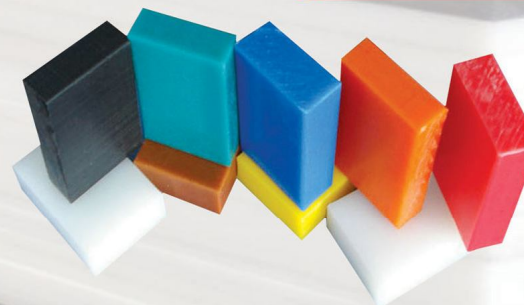

Polyethylene

UHMW-PE has incomparable advantages like impact resistance, wear resistance, self-lubrication, chemical resistance etc. Its work temperature can reach -269 degree. It can widely used in machinery, transportation, textile, paper, mining, agriculture, chemistry and sports area etc.
